

## Drowning for the manual cowpea thresher project

### 1. Introduction to the project

The Manual Cowpea Thresher Project addresses the challenges faced by small-scale farmers in Burkina Faso during post-harvest processing. Traditional threshing methods are labor-intensive, time-consuming, and often compromise seed quality. This project aims to design and develop an ergonomic, cost-effective, and sustainable manual thresher that improves efficiency, reduces labor, and enhances seed quality. Built using locally available materials, the machine is tailored to the needs of rural farmers, contributing to sustainable agricultural practices and improved livelihoods.

### 2. Purpose of the project:

### 3. Mechanism of operation:
