

No-Reesa's use cases in a Farm

by Hamado KONGO

No-Reesa, the voice translation app can help a lot in a farm, mainly in visitors' management domain.

This image gives you a short overview about the main use cases:

Using this app users can:

- Translate a Moore speech into an English Speech
- Translate an English speech into a Moore Speech
- Get the description of a plant in Moore language
- Get the description of a plant in English language

Let's remind you that Moore is the most spoken language in Burkina Faso.

In the context of this ontology, the class user has 3 instances that show the different use cases of the app.

Assuming that we are in a farm in Burkina Faso, two visitors Jens and Suzanne come from Germany to visit our far. The farm manager, Hamado a local farmer doesn't understand English. So, he uses No-Reesa to discuss with the tourist as they are able to speak English.

While visiting, the visitors wanted to know more about the history of some plants, then they used No-reesa to scan a **QR code** near the plant and got the translated story behind that.
