

# No-Reesa Ontology 20/12/2024

**by Hamado KONGO**

In this new ontology we reduced our ontologies to 5 and added the sustainableDevelopmentGoal class.

Then we have 6 classes:

## Short description:

A nation (Burkina Faso) has a university (BIT),

A university (BIT) has a Student (Hamado KONGO),

A student has a Project (No-Reesa),

A Project has a sustainableDevelopmentGoal(Reduce inequality within and among countries),

A Project has a User (Hamado, Jens),

The user (Hamado) can sendMooreAudio to the project(No-Reesa),

The user (Jens) can sendEnglishAudio to the project(No-Reesa),

The project (No-Reesa) can translate the mooreAudio of a User(Hamado) to English and play it for another User(Jens) ,

The project (No-Reesa) can translate the englishAudio of a User(Jens) to Moore and play it for another User(Hamado),

By considering that the User Hamado that did not go to school, is doing business and is able to travel to another country to interact with his business partners that understand English thanks to No-Reesa, we can say that No-Reesa is contributing to reduce the inequality within and among countries by unleashing the language barrier.
